

## CSCE 221 Assignment 5 Cover Page

First Name Cody Last Name Williams UIN 924008283

User Name will77868 E-mail address will77868@tamu.edu

Please list all sources in the table below including web pages which you used to solve or implement the current homework. If you fail to cite sources you can get a lower number of points or even zero, read more on Aggie Honor System Office website: <http://aggiehonor.tamu.edu/>

Type of sources				
People	Bailey Bauman	James Moore	Samantha Ray	Abhshiek Joshi
Web pages (provide URL)				
Printed material				
Other Sources				

I certify that I have listed all the sources that I used to develop the solutions/codes to the submitted work.  
*On my honor as an Aggie, I have neither given nor received any unauthorized help on this academic work.*

Your Name Cody Williams Date 04-13-17

- (20 points) A report which should consists of the following parts:
  - The cover page.
  - Assignment number and its description.
    - \* Assignment 5, Creating an output file of student names, grades, UIN's and test scores from a hash table
  - Description of data structures and algorithms used by your program.
    - \* Hash Table
    - \* LinkedList
    - \* Vector
    - \* Array
  - Description of input and output data. List all restrictions and assumptions that you have imposed on your input data and program.
    - \* Input Data: A file containing the names of 17 students, their E-mails, UIN's and Test scores
    - \* Output Data: A file containing the names of 100 students, their Names, Email's, UIN's and the test scores of the 17 students from the input files.
  - How have you tested your program for corrections?
    - \* To ensure my program ran correctly, I tested my program on the Unix server several times and made sure that the appropriate output was generated correctly each time.

- Which C++ features or standard library classes have you used in your program?
  - \* <iostream> <cstdlib> <string> <cstdio> <string> <fstream> <regex>
- Provide the statistics about the hash table. Are the computational results about the hashing consistent with the expected running time for the hashing algorithm? Justify your answer.
  - \* minimum: 1
  - \* maximum: 1
  - \* average: 1
- Write your conclusion.
  - \* Because this assignment instructed us to create a hash table of size 100, the running time of the search function ended up being O(n). The minimum, maximum and average lengths of the linked lists were also 1 because of this instruction.
